International Trade in Endangered Species Jun 22 2019 *The Investors' Environmental Guidelines* will be useful to all those associated with the process of investment in Central & Eastern Europe. The Guidelines have been designed for rapid use by the investor who knows very little about the environment, as well as for the environmental specialist working in the corporate environment unit. The Guidelines, in particular the sections covering liability & regulatory compliance, will also be of particular interest to lawyers. The Guidelines give a unique & up-to-date coverage of environmental legislation which will be of far wider interest to policy makers, consultants, NGOs & others, both from within the region & from western countries. In particular, they will be able to compare how investor-related environmental requirements are handled in other countries in the region. *The Investors' Environmental Guidelines* is based on a major project executed by the European Commission, with the theme of 'Harmonisation of Environmental Legislation & Standards' between Eastern & Western Europe.

Dr. Stefan Frank 2627 Dec 21 2021 In das Leben der Physiotherapeutin Vanessa Berger schleicht sich eine tückische Erkrankung: Sie leidet unter undefinierbaren Schmerzen. Anfangs ist es nur ein steifer Nacken. Sie schiebt es auf den Stress und behilft sich mit Ibuprofen, aber ihre Beschwerden werden schlimmer. Weder Medikamente noch Massagen zeigen noch Wirkung. Die Schmerzen scheinen zu "wandern", wenn es nicht der Nacken ist, tun ihr Finger oder die Schultern weh. Vanessa findet nachts keine Ruhe mehr. Sie ist unkonzentriert, weiß nicht mehr, wie sie ihre Arbeit meistern soll. Als Therapeutin muss sie fit sein, aber an manchen Tagen kann sie nicht mal mehr einen Kaffeebecher halten. Verzweifelt sucht sie Hilfe bei Dr. Frank. Der überweist sie nach einer ergebnislosen Untersuchung zu weiteren Fachärzten, und Vanessas Ärzte-Odyssee beginnt ...

Nonhuman Primates in Biomedical Research Nov 07 2020 A comprehensive, up-to-date review of the use of nonhuman primates in biomedical research, emphasising the biology and management, diseases, and biomedical models for nonhuman primate species most commonly used in research.

Fish Welfare Sep 05 2020 Fish have the same stress response and powers of nociception as mammals. Their behavioural responses to a variety of situations suggest a considerable ability for higher level neural

processing – a level of consciousness equivalent perhaps to that attributed to mammals. Each chapter of this book has been written by specialists in their field. The subject matter is wide ranging and covers in detail concepts of animal welfare in addition to more specific aspects of fish welfare. Philosophical concepts of welfare are discussed along with more practical areas of fish welfare encompassing all husbandry and management activities that have a potential to affect the welfare of the fish in our care. This book is an essential purchase for fish veterinarians, fish farmers, fish biologists and those involved in the aquaculture industry and its regulation.

The Palgrave International Handbook of Animal Abuse Studies Oct 26 2019 This Handbook fills a large gap in current scholarly literature on animal abuse studies. It moves considerably beyond the debate that has traditionally dominated the discourse of animal abuse – the link between one-on-one interpersonal violence and animal abuse – and towards those institutionalised forms of animal abuse which are routine, everyday, socially acceptable and invisibilised. Chapters from expert contributors raise issues such as: the use of animals as edibles; vivisection; animal sexual assault; animals used in sport and hunting; animal trafficking; the use of animals by youth gangs, by other groups and in war; species extinction; and the passivity of national and international organisations in combating animal abuse. The Handbook is a unique text: it is essential reading for students, researchers, academics, activists and policy makers involved in understanding and preventing animal abuse.

Laboratory Animal Law Dec 09 2020 Praise for the first edition: “It is hard to see how anyone with responsibilities under the Animals (Scientific Procedures) Act could manage without a book such as this.” Michael Balls, review published in *Atla* “The strength of the book lies in the way Kevin Dolan brings his experience to bear blending information from various sources.” Patrick Sinnott-Smith, review published in *RDS News* Written by the leading expert in this field, this is the only book providing practical guidance on the legal obligations of caring for laboratory animals. Up-to-date information on all relevant UK legislation and guidelines is given, with the main emphasis being on the interpretation of the Animals (Scientific Procedures) Act 1986. New to this edition: *Emphasis throughout is now on the practical application of legal controls of the use of animals in research. *Updated where relevant to keep in line with new welfare legislation. *Coverage of current format of application for personal and project licences. *Expanded coverage of Certificates of Designation. *Impact of the Freedom of Information Act is discussed. A vital resource for all those involved with the use of animals in research, and especially those studying for qualifications or licences in this field.

The Common Marmoset in Captivity and Biomedical Research Sep 17 2021 *The Common Marmoset in Captivity and Biomedical Research* is the first text dedicated exclusively to this species, filling an urgent need for an encyclopedic compilation of the existing information. Sponsored by the American College of Laboratory Animal Medicine as part of its authoritative Blue Book series, the book covers the biology, management, diseases, and clinical and research applications of this important species. The common marmoset (*Callithrix jacchus*) has come of age in the scientific community as a behaviorally complex, cognitively advanced, small, prolific, and easily maintained nonhuman primate with many of the advantages of larger animals, such as macaques, but without the attendant physical and zoonotic risks. Marmosets are currently being used in diverse areas of inquiry, including vision and auditory research, infectious disease, cognitive neuroscience, behavior, reproductive biology, toxicology and drug development, and aging. The marmoset genome has been sequenced and there is currently an intensive effort to apply gene editing technologies to the species. The creation of transgenic marmosets will provide researchers with a small nonhuman primate model to study a number of poorly understood disorders, like autism. Presents a complete view of the marmoset, covering their biology and management, diseases and clinical applications, and research applications Includes contributions from renowned and international authors and editors Provides the first authoritative and comprehensive treatment of marmosets in biomedical research as part of the ACLAM Series

Conservation, Biodiversity and International Law Aug 05 2020 'Humanity has been gambling for generations with the extent to which it can degrade nature and continue to prosper. Now the environmental debt is being called in and the ability of international diplomacy and law, government policy and political will to deal with the issues is being tested. Conservation, Biodiversity and International Law is a must read for any practitioner in the high-stakes business of restoring our ability to live in harmony with the natural world that sustains us.' – Alastair Morrison, Department of Conservation, New Zealand 'Biodiversity is the cornerstone of life – our plants, animals, and ecosystems are essential for livelihoods and have shaped our culture and traditions around the world. However our precious biodiversity is at risk as never before. Global targets to reduce biodiversity loss have not been met and we continue to lose biodiversity at an unprecedented rate. In fact we are currently in the middle of an extinction crisis and scientists have advised that one species from our planet is being lost every 38 minutes! The nature of this crisis and the actions taken to address it are clearly and articulately put forward in this landmark book by Professor Al Gillespie. This book is particularly useful in documenting the many policy and legal actions that have been taken to address these issues, and how the application of these instruments can be improved. Although focused on the law, the book covers a range of disciplines including science, philosophy and policy which lay the foundation for international law. This book makes a major and highly valued contribution to the discipline of environmental law and policy and is an invaluable reference for policy makers, practitioners and academic audiences.' – David Sheppard, CEO of the Secretariat of the Pacific Regional Environment Programme (SPREP) 'This book is written by a prominent and influential scholar who also has the benefit of first hand knowledge of practical working of environmental regimes, having participated in several important negotiations. Gillespie's monograph therefore stands out among other publications on the subject of conservation, combining thoughtful and scholarly approach to issues raised with un-parallel insights into the working of environmental law and the conservation of biodiversity. The book is very original in its presentation of this subject, especially in the selection of topics and the approach which is not only legal but also scientific, philosophical and political. This book is evidence of the great erudition of the author not only in the field of conservation but also in international environmental law and general international law, an example of which can be his analysis of the precautionary principle, trade and a very complex issue of the exception for indigenous peoples and science. Mention also must be made of his detailed approach to various multilateral treaty regimes such as Ramsar Convention and the World Heritage Convention. Gillespie wrote an exceptional book which is a must for international layers, both practitioners and scholars. It is a thought-provoking, very well researched and original monograph, which due to its all- encompassing approach will retain its importance for a very long period of time.' – Malgosia Fitzmaurice, Queen Mary, University of London, UK 'A major work: this book provides a comprehensive picture of the international legal challenges of natural heritage conservation. Truly an indispensable tool for policy-makers, experts and students. The book offers a complete guide to the complex world of treaties that regulate conservation at the global scale.' – Francesco Bandarin, UNESCO Assistant Director-General for Culture This important and timely book provides a rigorous overview of the defining issues presently facing conservation at international level. The author provides detailed coverage of topics ranging from the classification of species right through to access and benefit sharing, drawing on his personal experience at intergovernmental level. Each question is examined

through the prism of dozens of treaties and hundreds of decisions and resolutions of the key multilateral regimes, and the law in each area is supplemented by the necessary considerations of science politics and philosophy – providing much-needed context for the reader. Combining expert scholarship and first-hand insight, Conservation, Biodiversity and International Law will be an invaluable resource for researchers and practitioners in international environmental law, as well as providing an accessible guide for students.

Transportation of Laboratory Animals Mar 12 2021 The obligation to treat animals used in research ethically and humanely extends beyond their lives in the laboratory to include their transportation from place to place. Yet transporting animals is a highly regulated and complex process that raises many difficult issues. To examine these issues, the Roundtable on Science and Welfare in Laboratory Animal Use held a workshop on September 3-4, 2014, in Washington, DC. More than 200 people participated in the workshop in person and online, including representatives of academic research institutions, pharmaceutical and consumer product companies, government agencies, research advocacy groups, professional associations, and the public. The workshop was designed to draw attention to the essential thoughtful journey planning behind each transport of laboratory animals.

Techniques in Molecular Systematics and Evolution Jan 10 2021 The amount of information that can be obtained by using molecular techniques in evolution, systematics and ecology has increased exponentially over the last ten years. The need for more rapid and efficient methods of data acquisition and analysis is growing accordingly. This manual presents some of the most important techniques for data acquisition developed over the last years. The choice and justification of data analysis techniques is also an important and critical aspect of modern phylogenetic and evolutionary analysis and so a considerable part of this volume addresses this important subject. The book is mainly written for students and researchers from evolutionary biology in search for methods to acquire data, but also from molecular biology who might be looking for information on how data are analyzed in an evolutionary context. To aid the user, information on web-located sites is included wherever possible. Approaches that will push the amount of information which systematics will gather in the *Animal Harm* Sep 25 2019 Why do people harm, injure, torture and kill animals? This book evaluates the reasons why these crimes are committed and outlines the characteristics of the animal offender. It considers ethical and value judgements made about animals and the tacit acknowledgement and justification of unacceptable criminal behaviour towards the harming of animals made by offenders. Situating animal abuse, wildlife crime, illegal wildlife trading and other unlawful activities directed at animals firmly within Green Criminology, the book contends that this is a distinct, multi-dimensional type of criminality which persists despite the introduction of relevant legislation. Taking a broad approach, the book considers the killing and harming of animals in an international context and examines the effectiveness of current legislation, policy and sentencing. Including a section on further reading and useful organizations, this book is a valuable exploration into perspectives on the responsibility owed by man to animals as part of broader ecological and legal concerns. It will interest criminologists, ecologists, animal protectionists and those interested in law and society and law and the environment.

Management of Laboratory Animal Care and Use Programs Jul 24 2019 The management of biomedical research using animals has become increasingly complex due to new technology, increased regulatory oversight, and recognition of the need for animals free of disease and distress. Within this changing environment, individuals charged with the management of laboratory animal facilities have a substantial responsibility to the institution, the public, and the animals. *Management of Laboratory Animals Care and Use Programs* provides both factual and theoretical information drawn from the substantial experience of authors who are noted experts in the field. This book will provide individuals with the basic knowledge and information necessary to meet typical professional challenges. A co-publication with the American Association for Laboratory Animal Science, this valuable book serves as the text for the Certified Manager Animal Resources (CMAR) exam.

Introduction to the Air Transport System Jul 16 2021 The book provides deep insights into the operations and business of the air transport system, i.e., airlines, airports, and ATC/ATM (Air Traffic

Control/Management). It reviews activities of the air transport operators, functions and processes, as well as the needs and requirements of users and customers in a simple and easy to understand way. A brief description of aviation history, the air transport system development and processes are followed by the elaboration of the aircraft's elements, masses, payload-range diagrams, and balance. The fundamentals of airports and the ATC/ATM service providers and their contribution to the air transport system are also provided. Moreover, the most important elements in the airport and ATC/ATM system are examined, and the rules, regulations and simplified approaches to how these systems operate are described. Rambo, El Viajero Apr 12 2021 Der kolumbianische Ratten-Terrier Rambo stiess im Alter von 5 Monaten auf das "Team Grenzenlos Weltumradlung" von Igel & Paola Zimmermann, welches seit 2001 um die Welt radelt. In den Jahren 2004 bis 2009 reiste Rambo durch 12 Länder Südamerikas, nämlich durch Kolumbien, Ecuador, Peru, Bolivien, Brasilien, Venezuela, Guyana, Surinam, Französisch-Guayana, Argentinien, Paraguay und Chile. Er reiste meist mit Fahrrad und Hänger aber auch in LKWs und Bussen, mit Booten und Amazonasdampfern aber auch in grossen und sehr kleinen Flugzeugen. Rambo lernte Kokatrafikanten in den kolumbianischen Llanos Orientales kennen. Er war der erste Hund, der in Quito mit dem Telefériqo auf den Berg Pichincha auf 4'000m Höhe fahren durfte und fast alle Inka-Ruinen im Valle Sagrado in Peru besichtigt hat. Er litt mit seinen Herrchen in Bolivien unter der Abholzung und war der Star des Salars (Salar de Uyuni). Der Salto Angel in Venezuela wurde in Salto Rambo umbenannt und in Kourou wäre er fast zum Mond geflogen. In Guyana freundete er sich mit einem Tapir an und suchte Jaguare. Im brasilianischen Pantanal jagte er Wasserschweine und Alligatoren und in Paraguay ging er unter die Couchsurfer. Die Ruta 40 in Argentinien gefiel dem Rambo besonders gut und in Chile schlief er in Geisterstädten der Atacama-Wüste. Rambo El Viajero besteht aus 2 Teilen: Im Teil 1 erzählt uns Rambo seine Geschichte. Teil 2 ist ein Ratgeber mit Tipps für Leute, die auch gerne mit Hund (und Rad) reisen möchten, u.a. mit den Themen Impfungen, Visa- & Quarantäne Bestimmungen, praktische Länderinformationen (betr. Tourism and Animal Ethics Feb 08 2021 There is a long history of the involvement of animals for tourism purposes in circuses, zoos, fairs, ecotourism and wildlife tourism, using animals as the prime focus of their experience. The wave of responsibility and sustainability that currently permeates the tourism field is catalyzing deeper moral questions about equity, equality, rights, justice, and values in regards to what constitutes acceptable tourism practice. Tourism and Animal Ethics represents a required extension of the sustainability imperative and environmental theory by providing a critical account of the role that animals play in tourism. This book explores the rich history of animal ethics research that lies outside the field of tourism for the purpose of providing greater theoretical, empirical and conceptual guidance inside the field. It examines historical and current practices of the use of animals in the tourism industry from both in situ to ex situ consumption and production perspectives, identifying a range of ethical issues associated with such use. This detailed examination of current animal ethics theories will be instrumental in determining the rightness or wrongness of these practices, and hence allow tourism practitioners and theorists to think about these issues and practices in a different light, minimizing the impact that the industry has on animals. This text provides an interdisciplinary overview of the moral issues related to the use of animals in tourism, and contains cutting edge research and boxed international case studies throughout. It will appeal to students, academics and researchers interested in Tourism Ethics, Sustainable Tourism and Wildlife Tourism.
