[Smart Cities, Digital Nations](#) Jul 24 2019 Twenty-first century life, for most people, will be an urban experience. As millions migrate to cities in search of opportunity and connection, our conception of how a city runs, uses resources and manages public services must change. The city itself must be reimagined as a matrix of functions and information, with digitized networks harnessing and multiplying the power of data. This is not the future; this is today. Caspar Herzberg explains how ambitious new city plans across the world are moving from the drawing board into reality. As a top Cisco consultant, he participated in groundbreaking projects in South Korea, Saudi Arabia, India, China and many other countries. In *Smart Cities, Digital Nations*, he recounts the origins of seminal digital city-building projects, including Songdo, South Korea the Delhi-Mumbai Industrial Corridor and Saudi Arabia's King Abdullah Economic City, and explains how these early attempts have provided the groundwork for city planning efforts across the globe. Importantly, Herzberg moves beyond theory and discusses the delicate alliances between tech companies, city planners, municipal and national bureaucracies and citizen groups that undergird successful urban development. And while tech companies do not have all the answers, he explains their multifaceted contributions as absolutely necessary to the smart, forward-thinking digital infrastructure being created today. While recognizing the immense challenges of both engineering and consensus among diverse stakeholders, *Smart Cities, Digital Nations* makes clear that digital cities are essential to the future prosperity of many developing countries, and to the continuing vitality of the West. This is a unique perspective on the recent past, present and future of the modern city, a guide through its challenges and a vision of its success.

Cities and Cultures Sep 17 2021 *Cities and Cultures* is a critical account of the relations between contemporary cities and the cultures they produce and which in turn shape them. The book questions received ideas of what constitutes a city's culture through case studies in which different kinds of culture - the arts, cultural institutions and heritage, distinctive ways of life - are seen to be differently used in or affected by the development of particular cities. The book does not mask the complexity of this, but explains it in ways accessible for undergraduates. The book begins with introductory chapters on the concepts of a city and a culture (the latter in the anthropological sense as well as denoting the arts), citing cases from modern literature. The book then moves from a critical account of cultural production in a metropolitan setting to the idea that a city, too, is produced through the characteristic ways of life of its inhabitants. The cultural industries are scrutinised for their relation to such cultures as well as to city marketing, and attention is given to the European Cities of Culture initiative, and to the hybridity of contemporary urban cultures in a period of globalisation and migration. In its penultimate chapter the book looks at incidental cultural forms and cultural means to identify formation; and in its final chapter, examines the permeability

of urban cultures and cultural forms. Sources are introduced, positions clarified and contrasted, and notes given for selective further reading. Playing on the two meanings of culture, Miles takes a unique approach by relating arguments around these meanings to specific cases of urban development today. The book includes both critical comment on a range of literatures - being a truly inter-disciplinary study - and the outcome of the author's field research into urban cultures.

Proposed Zoning Ordinance for St. Joseph County and the Cities and Towns Therein Mar 12 2021

The Spaces of the Modern City Feb 08 2021 It historicizes the contemporary discussion of urbanism, highlighting the local and global breadth of the city landscape. This interdisciplinary collection examines how the city develops in the interactions of space and imagination. The essays focus on issues such as street design in Vienna, the motion picture industry in Los Angeles, architecture in Marseilles and Algiers, and the kaleidoscopic paradox of post-apartheid Johannesburg. They explore the nature of spatial politics, examining the disparate worlds of eighteenth-century Baghdad, nineteenth-century Morelia. They also show the meaning of everyday spaces to urban life, illuminating issues such as crime in metropolitan London, youth culture in Dakar, "memory projects" in Tokyo, and Bombay cinema.

Street Design Aug 17 2021 "The best streets in the world's villages, towns, and cities—whether modest or grand—continually remind one that simplicity is part of the recipe for success in this art. The advice of Victor Dover and John Massengale, their historic examples and their own designs, reflect that simplicity." —From the Foreword by HRH The Prince of Wales "Street Design is a lucid, practical and altogether indispensable guide for envisioning and creating vibrant 21st century towns and cities. It should be required reading for every local political leader, planner, architect, real estate developer and engaged urban citizen in America." —Kurt Andersen, host of Studio 360 and author of True Believers "We are going to start walking around the places we live again, and as that occurs and becomes normal, we will rapidly redevelop a demand for higher quality in building at the human scale." —From the Afterword by James Howard Kunstler "Your charrette traveling library must include the important Street Design book by Victor Dover and John Massengale."—Bill Lennertz, Executive Director, National Charrette Institute "What an amazing resource! For those who wish that my book, Walkable City, had pictures, this is the book for you. If either your work or your play includes the making of places, you will find Street Design to be an invaluable tool." —Jeff Speck, AICP, CNU-A, LEED-AP, Hon. ASLA Written by two accomplished architects and urban designers, this user-friendly street design manual shows both how to design new streets and enhance existing ones. It offers step-by-step instruction and shares examples of excellent streets, examining the elements that make them successful as well as how they were designed and created. Topics also include strategies for shaping space in the public right-of-way through correct building height to street width ratios, terminated vistas, landscaping, and street geometry. This book is a valuable resource for urban designers, planners, architects, and engineers. With guest essays from: Kaid Benfield, David Brussat, Javier Cenicacelaya, Hank Dittmar, Andres Duany, Douglas Duany, Emily Glavey, Chip Kaufman, Ethan Kent, Marieanne Khoury-Vogt, Léon Krier, Gianni Longo, Thomas Low, Laura Lyon, Chuck Marohn, Paul Murrain, John Norquist, Stefanos Polyzoides, Gabriele Tagliaventi and Erik Vogt.

Smart Cities and the UN SDGs Jul 04 2020 Smart Cities and the UN's SDGs explores how smart cities initiatives intersect with the global goal of making urbanization inclusive, resilient, and sustainable. Topics explored include digital governance, e-democracy, health care access, public-private partnerships, well-being, and more. Examining smart cities concepts, tools, strategies, and obstacles and their applicability to sustainability, the book exposes key structural problems that cities face and how the imperative of sustainability can bypass them. It shows how smart city technological innovation can boost citizens' well-being, serving as a key reference for those seeking to make sense of the issues and challenges of smart cities and SDGs. Includes numerous case studies from around the world Features interdisciplinary insights from academic and practitioner experts Offers an extensive literature review

Planet of Cities Oct 19 2021 Nearly 4,000 cities on our planet today have populations of 100,000 people or more. We know their names, locations, and approximate populations from maps and other data sources, but there is little comparable knowledge about all these cities, and none that can be described as rigorously scientific. The Planet of Cities together with its companion volume, the Atlas of Urban Expansion, contributes to developing a science of cities based on studying all these cities together—not in the abstract, but with a view to preparing them for their coming expansion. The book puts into question the main tenets of the familiar Containment Paradigm, also known as smart growth, urban growth management, or compact city, that is designed to contain boundless urban expansion, typically decried as sprawl. It examines this paradigm in a broader global perspective and shows it to be deficient and practically useless in addressing the central questions now facing expanding cities outside the United States and Europe. In its place Shlomo Angel proposes to revive an alternative Making Room Paradigm that seeks to come to terms with the expected expansion of cities, particularly in the rapidly urbanizing countries in Asia and Africa, and to make the minimally necessary preparations for such expansion instead of

seeking to contain it. This paradigm is predicated on four propositions: 1. The expansion of cities that urban population growth entails cannot be contained. Instead we must make adequate room to accommodate it. 2. City densities must remain within a sustainable range. If density is too low, it must be allowed to increase, and if it is too high, it must be allowed to decline. 3. Strict containment of urban expansion destroys the homes of the poor and puts new housing out of reach for most people. Decent housing for all can be ensured only if urban land is in ample supply. 4. As cities expand, the necessary land for public streets, public infrastructure networks, and public open spaces must be secured in advance of development. The first part of the book explores planetary urbanization in a historical and geographical perspective, to establish a global perspective for the study of cities. It confirms that we are in the midst of an urbanization project that started in earnest at the beginning of the nineteenth century, has now reached its peak with half the world population residing in urban areas, and will come to a close, possibly by the end of this century, when most people who want to live in cities will have moved there. This realization lends urgency to the call for preparing for urban expansion now, when the urbanization project is still in full swing, rather than later, when it would be too late to make a difference. The second part of the book seeks to deepen our understanding and thus lessen our fear of urban expansion by providing detailed quantitative answers to seven sets of questions regarding the dimensions and attributes of urban expansion: 1. What are the extents of urban areas everywhere and how fast are they expanding over time? 2. How dense are these urban areas and how are urban densities changing over time? 3. How centralized are the residences and workplaces in cities and do they tend to disperse to the periphery over time? 4. How fragmented are the built-up areas of cities and how are levels of fragmentation changing over time? 5. How compact are the shapes of urban footprints and how are their levels of compactness changing over time? 6. How much land would urban areas require in future decades? 7. How much cultivated land will be consumed by expanding urban areas? By answering these questions and exploring their implications for action, this book provides the conceptual framework, basic empirical data, and practical agenda necessary for the minimal yet meaningful management of the urban expansion process. The companion volume, *Atlas of Urban Expansion*, was also authored by Lincoln Institute visiting fellow Shlomo “

Lonely Planet Kids: The Cities Book Jun 02 2020

Annual Report, Financial Transactions Concerning Streets and Roads of Cities and Counties of California Mar 31 2020

The New Localism Sep 25 2019 The New Localism provides a roadmap for change that starts in the communities where most people live and work. In their new book, *The New Localism*, urban experts Bruce Katz and Jeremy Nowak reveal where the real power to create change lies and how it can be used to address our most serious social, economic, and environmental challenges. Power is shifting in the world: downward from national governments and states to cities and metropolitan communities; horizontally from the public sector to networks of public, private and civic actors; and globally along circuits of capital, trade, and innovation. This new locus of power—this new localism—is emerging by necessity to solve the grand challenges characteristic of modern societies: economic competitiveness, social inclusion and opportunity; a renewed public life; the challenge of diversity; and the imperative of environmental sustainability. Where rising populism on the right and the left exploits the grievances of those left behind in the global economy, new localism has developed as a mechanism to address them head on. New localism is not a replacement for the vital roles federal governments play; it is the ideal complement to an effective federal government, and, currently, an urgently needed remedy for national dysfunction. In *The New Localism*, Katz and Nowak tell the stories of the cities that are on the vanguard of problem solving. Pittsburgh is catalyzing inclusive growth by inventing and deploying new industries and technologies. Indianapolis is governing its city and metropolis through a network of public, private and civic leaders. Copenhagen is using publicly owned assets like their waterfront to spur large scale redevelopment and finance infrastructure from land sales. Out of these stories emerge new norms of growth, governance, and finance and a path toward a more prosperous, sustainable, and inclusive society. Katz and Nowak imagine a world in which urban institutions finance the future through smart investments in innovation, infrastructure and children and urban intermediaries take solutions created in one city and adapt and tailor them to other cities with speed and precision. As Katz and Nowak show us in *The New Localism*, “Power now belongs to the problem solvers.”

Cities and Economic Development Mar 24 2022 When and how were cities born? Does urbanization foster innovation and economic development? What was the level of urbanization in traditional societies? Did the Industrial Revolution facilitate urbanization? Has the growth of cities in the Third World been a handicap or an asset to economic development? In this revised translation of *De Jéricho à Mexico*, Paul Bairoch seeks the answers to these questions and provides a comprehensive study of the evolution of the city and its relation to economic life. Bairoch examines the development of cities from the dawn of urbanization (Jericho) to the explosive growth of the contemporary Third World city. In particular, he defines the roles of agriculture and industrialization in the rise of cities. “A hefty history, from the Neolithic onward. It’s ambitious in scope and rich in subject, detailing urbanization and, of course, the links between cities and economies. Scholarly, accessible, and significant.”—Newsday

"This book offers a path-breaking synthesis of the vast literature on the history of urbanization."—John C. Brown, *Journal of Economic Literature* "One leaves this volume with the feeling of positions intelligently argued and related to the existing state of theory and knowledge. One also has the pleasure of reading a book unusually well-written. It will long both be a standard and stimulate new thought on the central issue of urban and economic growth."—Thomas A. Reiner, *Annals of the American Academy of Political and Social Science*

The Empire of the Cities Jul 16 2021 This study of the Spanish monarchy, bureaucracy and representative government under Charles V before and after the comunero revolt (1520-1521) demonstrates how the emperor and Castilian republics institutionalized management procedures that promoted accountability, advanced a meritocracy, and facilitated expansionism and domestic stability.

The Sins of the Cities of the Plain Aug 05 2020 Jack Saul is a handsome young man in London, who has found his body to be his best asset and makes his way through life as a prostitute. One day, Jack is picked up by a male customer in Leicester Square, and after their encounter, the man offers to pay Jack for a written account of his experiences. What follows is *The Sins of the Cities of the Plain*, a narrative tracing in explicit detail the development of Jack's "vices" as he progresses from boarding school and into young adulthood amidst London's thriving but clandestine gay underworld. Featuring a mixture of fact and fiction and incorporating real-life personages involved in the Cleveland Street Scandal, the Oscar Wilde trials, and other infamous legal proceedings of the period, *The Sins of the Cities of the Plain* was one of the first and frankest works on homosexuality in Victorian England. Read by Oscar Wilde and an influence on the more famous gay erotic novel *Teleny* (1893), *The Sins of the Cities of the Plain* was privately printed in two volumes in 1881 and is completely unobtainable today. This new edition contains the unabridged text of the first edition housed at the British Library, together with a new introduction by Wolfram Setz and a facsimile reproduction of the original volumes' title pages. Although two previous modern editions have been published under this title, they are severely altered and rewritten versions of the story; this edition marks the first complete reprinting of the original text.

Exegeting the City Oct 26 2019 As the tide has turned and a wave of church planters have washed up on the shorelines of city centers many are learning to navigate the intricacies of urban life for the first time. Many of today's North American church planters are migrating in from the suburbs, smaller cities, and rural towns as they are confronted with a culture, lifestyle, and built environment that is more foreign than they thought ... or would admit. What do church planters need to know about the city in order to be effective? *Exegeting the City* was written for you, the church planter, to expand your understanding of the city. This will aid you in the process of contextualization as you discern how to embody, teach, and proclaim the Gospel in the city. Besides, your city needs you to do this. Throughout the book you will be exposed to different trends that are reshaping the city both in culture and urban form. This in turn influences how people experience and live in the city which then has direct bearing in how you plant a church. *Exegeting the city* today is of critical importance.

The Economics of Cities and Suburbs May 26 2022 Designed to convey the excitement of studying cities while developing a set of formal tools for analyzing their economies. KEY TOPICS: The book attempts to remove the division between “urban” economics and “regional” economics by demonstrating that the traditional intermetropolitan models of specialization and trade can also be extended to intrametropolitan analysis, thus unifying their treatment.

Cities by Design Jul 28 2022 Who makes our cities, and what part do everyday users have in the design of cities? This book powerfully shows that city-making is a social process and examines the close relationship between the social and physical shaping of urban environments. With cities taking a growing share of the global population, urban forms and urban experience are crucial for understanding social injustice, economic inequality and environmental challenges. Current processes of urbanization too often contribute to intensifying these problems; cities, likewise, will be central to the solutions to such problems. Focusing on a range of cities in developed and developing contexts, *Cities by Design* highlights major aspects of contemporary urbanization: urban growth, density and sustainability; inequality, segregation and diversity; informality, environment and infrastructure. Offering keen insights into how the shaping of our cities is shaping our lives, *Cities by Design* provides a critical exploration of key issues and debates that will be invaluable to students and scholars in sociology and geography, environmental and urban studies, architecture, urban design and planning.

For the City Yet to Come Jun 26 2022 Among government officials, urban planners, and development workers, Africa's burgeoning metropolises are frequently understood as failed cities, unable to provide even basic services. Whatever resourcefulness does exist is regarded as only temporary compensation for fundamental failure. In *For the City Yet to Come*, AbdouMaliq Simone argues that by overlooking all that does work in Africa's cities, this perspective forecloses opportunities to capitalize on existing

informal economies and structures in development efforts within Africa and to apply lessons drawn from them to rapidly growing urban areas around the world. Simone contends that Africa's cities do work on some level and to the extent that they do, they function largely through fluid, makeshift collective actions running parallel to proliferating decentralized local authorities, small-scale enterprises, and community associations. Drawing on his nearly fifteen years of work in African cities—as an activist, teacher, development worker, researcher, and advisor to ngos and local governments—Simone provides a series of case studies illuminating the provisional networks through which most of Africa's urban dwellers procure basic goods and services. He examines informal economies and social networks in Pikine, a large suburb of Dakar, Senegal; in Winterveld, a neighborhood on the edge of Pretoria, South Africa; in Douala, Cameroon; and among Africans seeking work in Jeddah, Saudi Arabia. He contextualizes these particular cases through an analysis of the broad social, economic, and historical conditions that created present-day urban Africa. For the City Yet to Come is a powerful argument that any serious attempt to reinvent African urban centers must acknowledge the particular history of these cities and incorporate the local knowledge reflected in already existing informal urban economic and social systems.

The Cities Book Oct 31 2022 Lonely Planet's bestselling The Cities Book is back. Fully revised and updated, it's a celebration of 200 of the world's great cities, beautifully photographed and packed with trip advice and recommendations from our experts - making it the perfect companion for any traveller deciding where to visit next.

The Spirit of Cities Feb 20 2022 A lively and personal book that returns the city to political thought Cities shape the lives and outlooks of billions of people, yet they have been overshadowed in contemporary political thought by nation-states, identity groups, and concepts like justice and freedom. The Spirit of Cities revives the classical idea that a city expresses its own distinctive ethos or values. In the ancient world, Athens was synonymous with democracy and Sparta represented military discipline. In this original and engaging book, Daniel Bell and Avner de-Shalit explore how this classical idea can be applied to today's cities, and they explain why philosophy and the social sciences need to rediscover the spirit of cities. Bell and de-Shalit look at nine modern cities and the prevailing ethos that distinguishes each one. The cities are Jerusalem (religion), Montreal (language), Singapore (nation building), Hong Kong (materialism), Beijing (political power), Oxford (learning), Berlin (tolerance and intolerance), Paris (romance), and New York (ambition). Bell and de-Shalit draw upon the richly varied histories of each city, as well as novels, poems, biographies, tourist guides, architectural landmarks, and the authors' own personal reflections and insights. They show how the ethos of each city is expressed in political, cultural, and economic life, and also how pride in a city's ethos can oppose the homogenizing tendencies of globalization and curb the excesses of nationalism. The Spirit of Cities is unreservedly impressionistic. Combining strolling and storytelling with cutting-edge theory, the book encourages debate and opens up new avenues of inquiry in philosophy and the social sciences. It is a must-read for lovers of cities everywhere. In a new preface, Bell and de-Shalit further develop their idea of "civicism," the pride city dwellers feel for their city and its ethos over that of others.

Hadrian and the Cities of the Roman Empire Jan 10 2021 In this comprehensive investigation into the vibrant urban life that existed under Hadrian's rule, the author focuses on the emperor's direct interactions with Rome's cities, exploring the many benefactions for which he was celebrated on coins and in literary works and inscriptions.

The City Apr 24 2022 If humankind can be said to have a single greatest creation, it would be those places that represent the most eloquent expression of our species's ingenuity, beliefs, and ideals: the city. In this authoritative and engagingly written account, the acclaimed urbanist and bestselling author examines the evolution of urban life over the millennia and, in doing so, attempts to answer the age-old question: What makes a city great? Despite their infinite variety, all cities essentially serve three purposes: spiritual, political, and economic. Kotkin follows the progression of the city from the early religious centers of Mesopotamia, the Indus Valley, and China to the imperial centers of the Classical era, through the rise of the Islamic city and the European commercial capitals, ending with today's post-industrial suburban metropolis. Despite widespread optimistic claims that cities are "back in style," Kotkin warns that whatever their form, cities can thrive only if they remain sacred, safe, and busy—and this is true for both the increasingly urbanized developing world and the often self-possessed "global cities" of the West and East Asia. Looking at cities in the twenty-first century, Kotkin discusses the effects of developments such as shifting demographics and emerging technologies. He also considers the effects of terrorism—how the religious and cultural struggles of the present pose the greatest challenge to the urban future. Truly global in scope, The City is a timely narrative that will place Kotkin in the company of Lewis Mumford, Jane Jacobs, and other preeminent urban scholars.

Planning in the Cities and Counties of the Bay Area Jun 14 2021

Inventing Future Cities Jun 22 2019 How we can invent—but not predict—the future of cities. We cannot predict future cities, but we can invent them. Cities are largely

unpredictable because they are complex systems that are more like organisms than machines. Neither the laws of economics nor the laws of mechanics apply; cities are the product of countless individual and collective decisions that do not conform to any grand plan. They are the product of our inventions; they evolve. In *Inventing Future Cities*, Michael Batty explores what we need to understand about cities in order to invent their future. Batty outlines certain themes—principles—that apply to all cities. He investigates not the invention of artifacts but inventive processes. Today form is becoming ever more divorced from function; information networks now shape the traditional functions of cities as places of exchange and innovation. By the end of this century, most of the world's population will live in cities, large or small, sometimes contiguous, and always connected; in an urbanized world, it will be increasingly difficult to define a city by its physical boundaries. Batty discusses the coming great transition from a world with few cities to a world of all cities; argues that future cities will be defined as clusters in a hierarchy; describes the future “high-frequency,” real-time streaming city; considers urban sprawl and urban renewal; and maps the waves of technological change, which grow ever more intense and lead to continuous innovation—an unending process of creative destruction out of which future cities will emerge.

City of Walls Dec 29 2019 "This is an extraordinary treatment of a difficult problem. . . . Much more than a conventional comparative study, *City of Walls* is a genuinely transcultural, transnational work—the first of its kind that I have read."—George E. Marcus, author of *Ethnography Through Thick & Thin* "Caldeira's work is wonderfully ambitious-theoretically bold, ethnographically rich, historically specific. Anyone who cares about the condition and future of cities, of democracy, of human rights should read this book."—Thomas Bender, Director of the Project on Cities and Urban Knowledges "City of Walls is a brilliant analysis of the dynamics of urban fear. The sophistication of Caldeira's arguments should stimulate new discussion of cities and urban life. Its significance goes far beyond the borders of Brazil."—Margaret Crawford, Professor of Urban Planning and Design Theory, Graduate School of Design, Harvard University "Caldeira's insight illuminates the geography of the city as well as the boundaries—or the lack of boundaries—of violence."—Paul Chevigny, author of *Edge of the Knife: Police Violence in the Americas* "An extraordinary account of violence in the city. . . . Caldeira brings to this task a rare depth of knowledge and understanding."—Saskia Sassen, author of *Globalization and Its Discontents* "An outstanding contribution to understanding authoritarian continuity under political reform. Caldeira has written a brilliant and bleak analysis on the many challenges and obstacles which government and civil society face in new democracies."—Paulo Sérgio Pinheiro, Director of the Center for the Study of Violence, University of São Paulo and Member of the United Nations Sub-Commission for the Promotion and Protection of Human Rights

Nest City Feb 29 2020 In *Nest City*, Beth Sanders argues that our linear ways of thinking about, organizing and planning our cities do not meet the true nature of cities as complex and messy systems. There are no simple solutions to the challenges we face: many citizens don't feel they belong; we don't agree on how to best move around; many don't have jobs, or homes they can afford; we make running businesses challenging; we are facing challenges with the climate crisis. At a time when understanding the relationship between our physical, economic and social habitats is essential, Sanders sets forth an approach to work with the disruptions of our times. Drawing on her experience as a city planner and a relationship-broker in the conflicts that surface in city life, Sanders offers several strategies to explore how citizens, public institutions, community organizations and the business community can work together to improve our cities. She explores the evolutionary nature of our relationship with cities, and how the tension we experience in city life compels each of us to work to improve our cities. Our work is what regenerates our cities. The city habitats we make for ourselves are as good as we choose to make them. If they're not good enough, it's up to us to improve them. The result is a book that articulates the importance of having a sense of direction, being willing as citizens and cities to learn along the way, and accepting the uncertainty and messiness of cities as opportunities to improve them--so they serve citizens well. *Nest City* will forever alter the way you look at your city, your local public institutions and community organizations and business--and how you think about and contribute to your city.

Cities and Sustainability Aug 24 2019 The book addresses the sustainability of cities in the context of sustainability science and its application to the city boundary. In doing so it investigates all the components of a city on the basis of sustainability criteria. To achieve sustainability it is essential to adopt an integrated strategy that reflects all sectors within the city boundary and also address the four key normative concepts: the right to develop for all sections, social inclusion, convergence in living standards and shared responsibility and opportunities among sectors and sections. In this book, the individual chapters examine the nodes of sustainability of a city and thus essentially present a large canvas wherein all sustainability-relevant issues are interwoven. This integrative approach is at the heart of the book and offers an extensive, innovative framework for future research on cities and sustainability alike. The book also includes selected case studies that add to the reading and comprehension value of the concepts presented, ensuring a blend of theory and practical case studies to help readers better comprehend the principle of sustainability and its application.

The Secret Life of Cities Aug 29 2022 Contemporary urbanisation has two faces: global flows of people, money and information, and that of localised social and economic disparities. Recent research has focused on the headlines of global cities as control centres of the world economy, and social and economic shock waves that have raged through cities and regions, but less attention has been paid to the secret life of cities, and the changing nature of everyday life in the wake of such changes. This book challenges current research and policy agendas recommending spatial concentration and relocation as a solution to the problems of environmental sustainability and social dislocation. Instead, this book highlights the key linkages between social and environmental problems, it argues that neither are likely to be resolved with a simple spatial fix. The book draws attention to local contexts of contemporary urbanisation emphasising consideration of policy making from the perspective of the household as a key unit of analysis in identifying links between labour and housing markets, transport and leisure. This book draws upon detailed household interviews about the daily experience of life in a global city. It illustrates the dilemmas and solutions that people routinely find in order to go on in their lives. It shows that these local fixes that are managed at the level of the household work in spite of, and sometimes against, existing policies aimed at sustainability. It concludes that policy making needs to be radically overhauled in order to address the integrated nature of people's everyday lives.

Cities and the Grand Tour Oct 07 2020 How did eighteenth-century travellers experience, describe and represent the urban environments they encountered as they made the Grand Tour? This fascinating book focuses on the changing responses of the British to the cities of Florence, Rome, Naples and Venice, during a period of unprecedented urbanisation at home. Drawing on a wide range of unpublished material, including travel accounts written by women, Rosemary Sweet explores how travel literature helped to create and perpetuate the image of a city; what the different meanings and imaginative associations attached to these cities were; and how the contrasting descriptions of each of these cities reflected the travellers' own attitudes to urbanism. More broadly, the book explores the construction and performance of personal, gender and national identities, and the shift in cultural values away from neo-classicism towards medievalism and the gothic, which is central to our understanding of eighteenth-century culture and the transition to modernity.

Financial Statistics of Cities Having a Population of Over 100,000 Jan 28 2020

Great City Maps Dec 09 2020

Cities and Urban Life Apr 12 2021 Revised edition of the authors' *Cities and urban life*, 2013.

The Sins of the Cities of the Plain Nov 19 2021 *The Sins of the Cities of the Plain*; or, *The Recollections of a Mary-Ann*, with Short Essays on Sodomy and Tribadism, by the pseudonymous "Jack Saul", is one of the first exclusively homosexual works of pornographic literature published in English. It has been suggested that it was largely written by James Campbell Reddie and the painter Simeon Solomon, who had been convicted of public indecency in 1873 and disgraced. Reddie died several years before its publication, and was ill with poor eyesight prior to that, which makes his connection less likely. The book was first published in 1881. *The Sins of the Cities of the Plain* purports to be the memoirs of Jack Saul, a young rentboy or "Mary-Ann". In the book Saul is picked up on the street by a Mr. Cambon. After they have dinner, Chambon invites Saul to recount his life story. While some have accepted it as a genuine account, it is more likely to be an early form of the non-fiction novel. John Saul was an actual male prostitute of Irish birth, known as 'Dublin Jack', who was involved in a homosexual scandal at Dublin castle in 1884, and later in the Cleveland Street scandal. The book is clearly inspired by him, and it is possible he shared his experiences with the anonymous author/s. Factual details suggest the book could be based on an authentic rentboy's account, but one that has been elaborated. There are consistencies with the real life Saul, but also discrepancies: he was of Irish birth, but in the book he is English.

The Death and Life of Great American Cities Jan 22 2022 Published to coincide with the 50th anniversary of its initial publication, this special edition of Jane Jacobs's masterpiece, *The Death and Life of Great American Cities*, features a new Introduction by Jason Epstein, the book's original editor, who provides an intimate perspective on Jacobs herself and unique insights into the creation and lasting influence of this classic. *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning. . . . [It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jane Jacobs's tour de force is a blueprint for the humanistic management of cities. It remains sensible, knowledgeable, readable, and indispensable.

Cities and the Meanings of Late Antiquity May 02 2020 This study examines how cities have become an area of significant historical debate about late antiquity, challenging accepted notions that it is a period of dynamic change and reasserting views of the era as one of decline and fall.

Anthropology in the City May 14 2021 With half of humanity already living in towns and cities and that proportion expected to increase in the coming decades, society - both Western and non-Western - is fast becoming urban and even mega-urban. As such, research in urban settings is evidently timely and of great importance.

Anthropology in the City brings together a leading team of anthropologists to address the complex methodological and theoretical challenges posed by field-research in urban settings, clearly identifying the significance of the anthropological paradigm in urban research and its centrality both to mainstream academic debates and to society more broadly. With essays from experts on wide-ranging ethnographic research from fields as diverse as China, Europe, India, Latin and North America and South East Asia, this book demonstrates the contribution that empirically-based anthropological analysis can make to our understanding of our increasingly urban world.

Jungle of Cities Nov 07 2020 For contents, see Author Catalog.

Participate! Sep 05 2020 Participate! Portraits of Cities and Citizens in Action' offers an introduction to the complex world of urban development, identity and participation. It explains how the self-understanding of cities is mirrored in their approach to urban development. The basis of the book is formed by portraits of six European cities: Berlin, Hamburg, Paris, Lyon, Amsterdam and Groningen.00The book fills a gap as it provides general introductions to cities, a brief outline of the city's planning system, a short historic introduction to the city's planning culture. With telling and outstanding examples of citizen participation this book offers important insights in both the intrinsic logic of the cities and the mechanisms - sometimes more inclusive, sometimes more exclusive- of participation.00'Participate!' Is one of the results of the R-link project, a unique cooperation of Dutch policy makers and scholars on participation and urban development. Of interest for urban planners, architects, city journalists and students and academics in the field of urban planning.

Environmental Problems in European Cities in the 19th and 20th Century Dec 21 2021

Public Values for Cities and City Policy Nov 27 2019 This book provides a framework for understanding the creation of public value in urban environments. The ability of cities to produce value is related to their capacity to generate meaningful resources for city residents and workers that enable them to craft meaningfulness in life and work. Meaningfulness and public value require new ways of leading and developing city governance. This extends to designing inclusive structures and processes for people to grapple with the meanings and values underpinning public value creation. A public value framework demands that city governance goes beyond ordinary government to considerations of how to involve city residents and workers in creating and maintaining the common good. The common good is determined by an inclusive associational life characterized by deliberative processes and opportunities for social contribution. When acting upon their entitlements to make the city, urban residents and workers - as members of diverse civic, public and private organizations - co-create the meanings that facilitate the collective action necessary to translate values into value. The experience of cooperating for the common good produces meanings that people can adopt into a sense that their lives have significance and purpose. This is particularly relevant to understanding how to motivate just and inclusive sustainability transitions, especially as cities recover from the Covid-19 pandemic. Focusing on cities and urban policy, the main theme of this book is to elaborate on public values for cities and city policies, and to further develop the concept of the meaningful city. This book aims to provide new kinds of tools for city development that can help them co-create resilience against future shocks.

Imaginary Cities Sep 29 2022 How can we understand the infinite variety of cities? Darran Anderson seems to exhaust all possibilities in this work of creative nonfiction. Drawing inspiration from Marco Polo and Italo Calvino, Anderson shows that we have much to learn about ourselves by looking not only at the cities we have built, but also at the cities we have imagined. Anderson draws on literature (Gustav Meyrink, Franz Kafka, Jaroslav Hasek, and James Joyce), but he also looks at architectural writings and works by the likes of Bruno Taut and Walter Gropius, Medieval travel memoirs from the Middle East, mid-twentieth-century comic books, Star Trek, mythical lands such as Cockaigne, and the works of Claude Debussy. Anderson sees the visionary architecture dreamed up by architects, artists, philosophers, writers, and citizens as wedded to the egalitarian sense that cities are for everyone. He proves that we must not be locked into the structures that exclude ordinary citizens--that cities evolve and that we can have input. As he says: "If a city can be imagined into being, it can be re-imagined as well."
