Crazy Detective. Morsom detektiv Aug 02 2022 I England er det en detektiv, Sherlock Holmes og Dr. Watson; I Europa – Hercule Poirot og Hastings; i USA, Niro Wolfe og Archie Goodwin. Og her, russerne, er dette distriktsgeneralen Klop og hans ekle assistent, korporal, Incifalapat. Sammen vil de ikke se hverandre, men dette hindrer dem ikke i å eterforske straffesaker... Denne romanen ble likt av Putin. # Alle rettigheter forbeholdt.

The Oxford Handbook of Local and Regional Democracy in Europe Mar 17 2021 The Oxford Handbook of Local and Regional Democracy in Europe analyses the state of play of democracy at the subnational level in the 27 member states of the EU plus Norway and Switzerland. It places subnational democracy in the context of the distinctive Anglo, the French, the German and Scandinavian state traditions in Europe asking to what extent these are still relevant today. The Handbook adapts Lijphart's theory of democracy and applies it to the subnational levels in all the country chapters. A key theoretical issue is whether subnational (regional and local) democracy is derived from national democracy or whether it is legitimate in its own right. Besides these theoretical concerns it focuses on the practice of democracy: the roles of political parties and interest groups and also how subnational political institutions relate to the ordinary citizen. This can take the form of local referendums or other mechanisms of participation. The Handbook reveals a wide variety of practices across Europe in this regard. Local financial systems also reveal a great variety. Finally, each chapter examines the challenges facing subnational democracy but also the opportunities available to them to enhance their democratic systems. Among the challenges identified are: Europeanization, globalization, but also citizens disaffection and switch-off from politics. Some countries have confronted these challenges more successfully than others but all countries face them. An important aspect of the Handbook is the inclusion of all the countries of East and Central Europe plus Cyprus and Malta, who joined the EU in 2004 and 2007. This is the first time they have been examined alongside the countries of Western Europe from the angle of subnational democracy.

E-Research in Educational Contexts Sep 10 2020 This book explores the impact of e-research in education and the opportunities presented by a new generation of research approaches and tools. 'E-research' is an umbrella term that encompasses all digital research methods used for data collection and analysis including those involving handheld mobile devices. This is a current concern as the emergence of online tools that enable people to collaborate, create, and share information has led to the widespread use of these new digital research methods. Indeed, new tools and technologies are emerging almost daily and are being taken up by researchers for their ease of data collection and analysis. As a result the book investigates the implications of how we conceptualise educational research in the digital age. In addressing a range of key themes, from the ethics of e-research to the relationships between researchers and participants, the book presents original studies from a variety of educational contexts where digital tools are being used, and should be of value to postgraduate students, academic researchers, and policy makers. This book was originally published as a special issue of the International Journal of Research & Method in Education. **Oil Spill Environmental Forensics Case Studies** Sep 22 2021 Oil Spill Environmental Forensics Case Studies includes 34 chapters that serve to present various aspects of environmental forensics in relation to "real-world oil spill case studies from around the globe. Authors representing academic, government, and private researcher groups from 14 countries bring a diverse and global perspective to this volume. Oil Spill Environmental Forensics Case Studies addresses releases of natural gas/methane, automotive gasoline and other petroleum fuels, lubricants, vegetable oils, paraffin waxes, bitumen, manufactured gas plant residues, urban runoff, and, of course, crude oil, the latter ranging from light Bakken shale oil to heavy Canadian oil sands oil. New challenges surrounding forensic investigations of stray gas in the shallow subsurface, volatiles in air, dissolved chemicals in water (including passive samplers), and biological tissues associated with oil spills are included, as are the effects and long-term oil weathering, long-term monitoring in urbanized and non-urbanized environments, fate and transport, forensic historical research, new analytical and chemical data processing and interpretation methods. Presents cases in each chapter on the application of specific oil spill environmental forensic techniques Features chapters written by international experts from both academia and industry Includes relevant concepts and theories elucidated for each theme

Trenger deg dad May 07 2020 Hvordan blir man morder? Lorna Belling gjør hva som helst for å komme seg ut av et destruktivt ekteskap og faller for en ny mann – som lover henne gull og grønne skoger. Men som Lorna finner ut, kan det ofte være manglende samsvar mellom det man planlegger og den vendingen livet faktisk tar. Et tilfeldig foto på en mobil til en av klientene endrer alt for henne. På et offentlig bad i Brighton finner man liket av en kvinne, og politietterforsker Roy Grace tilkalles. Det som først ser ut som en ukomplisert sak med en åpenbar hovedmistenkt, viser seg til Grace sin store overraskelse å være alt annet enn akkurat det. Peter James er et av krimlitteraturens aller sterkeste navn. «James blir bare bedre og bedre. Han fortjener virkelig all suksessen han har hatt med denne førsteklassen serien.» Independent on Sunday

Oil Spill Science and Technology Oct 04 2022 The National Academy of Sciences estimate that 1.7 to 8.8 million tons of oil are released into world's water every year, of which more than 70% is directly related to human activities. The effects of these spills are all too apparent: dead wildlife, oil covered marshlands and contaminated water chief among them. This reference will provide scientists, engineers and practitioners with the latest methods use for identify and eliminating spills before they occur and develop the best available techniques, equipment and materials for dealing with oil spills in every environment. Topics covered include: spill dynamics and behaviour, spill treating agents, and cleanup techniques such as: in situ burning, mechanical containment or recovery, chemical and biological methods and physical methods are used to clean up shorelines. Also included are the fate and effects of oil spills and means to assess damage. Covers spill dynamics and behaviour Definitive guide to spill treating agents Complete coverage of cleanup techniques Includes fate and effects of oil spills and means to assess damage

Oil Pollution and its Environmental Impact in the Arabian Gulf Region Feb 02 2020 Situated within the richest oil area in the world, the Arabian Gulf represents a stressed ecosystem with scarce published data and environmental studies. The oil-related activities cause significant damages to different ecosystem components such as coral reefs, algal mats, mangrove and other habitats. In addition to the increasing potential of pollution and its adverse effect on the ecosystem, oil spills and relevant implications can severely affect the main source of desalinated water for the Gulf countries due to their limited water resources. Interest in pollution issues associated with Arabian Gulf has been growing in the last few years. These issues include identification and documentation of the major sources of oil pollution in the Gulf region, evaluation of the analytical methods used to identify the different types of pollutants, review of the recent advances in oil pollution impact treatment and prevention, develop stronger cooperation ties between interested members of the community, and encourage awareness of the oil pollution as a serious environmental problem in the region. This book compiles recent studies addressing the above issues grouped in four categories: monitoring and characterizing oil spills, modeling the fate of pollutants and oil slicks in marine water, environmental effects of oil pollution on the ecosystem components, and combating, prevention and treatment of oil pollution. * Studies oil pollution issues in association with the Arabian Gulf * Compiles recent case studies conducted in the Arabian Gulf * Addresses diverse topics related to pollution issues in the marine water in general and in the Arabian Gulf in particular
