Gas and Oil Equipment Directory Jun 27 2019

Oil and Security Feb 25 2022 Increasing petroleum costs, supply uncertainties, political factors, and environmental damage are forcing a radical move towards alternatives. This book provides an up-to-date review of the socio-economic, political, and environmental factors forcing a new approach to global energy developments and use. It reviews alternative fuel and energy conversion technology developments that will help create a cleaner and more secure future.

Supercritical Fluid Technology for Energy and Environmental Applications Mar 17 2021 *Supercritical Fluid Technology for Energy and Environmental Applications* covers the fundamental principles involved in the preparation and characterization of supercritical fluids (SCFs) used in the energy production and other environmental

applications. Energy production from diversified resources — including renewable materials — using clean processes can be accomplished using technologies like SCFs. This book is focused on critical issues scientists and engineers face in applying SCFs to energy production and environmental protection, the innovative solutions they have found, and the challenges they need to overcome. The book also covers the basics of sub- and supercritical fluids, like the thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations. A supercritical fluid is any substance at a temperature and pressure above its critical point where distinct liquid and gas phases do not exist. At this state the compound demonstrates unique properties, which can be "fine-tuned," making them suitable as organic solvents in a range of industrial and laboratory processes. This volume enables readers to select the most appropriate medium for a specific situation. It helps instructors prepare course material for graduate and postgraduate courses in the area of chemistry, chemical engineering, and environmental engineering. And it helps professional engineers learn supercritical fluid-based technologies and use them in solving the increasingly challenging environmental issues. Relates theory, chemical characteristics, and properties of the particular supercritical fluid to its various applications Covers the fundamentals of supercritical fluids, like thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations Includes the most recent applications of supercritical fluids, including energy generation, materials synthesis, and environmental protection

The Oil and Gas Journal Apr 17 2021

Exploitation of Unconventional Oil and Gas Resources Sep 03 2022 The stimulation of unconventional hydrocarbon reservoirs is proven to improve their productivity to an extent that has rendered them economically viable. Generally, the stimulation design is a complex process dependent on intertwining factors such as the history of the formation, rock and reservoir fluid type, lithology and structural layout of the formation, cost, time, etc. A holistic grasp of these can be daunting, especially for people without sufficient experience and/or expertise in the exploitation of unconventional hydrocarbon reserves. This book presents the key facets integral to producing unconventional resources, and how the different components, if pieced together, can be used to create an integrated stimulation design. Areas covered are as follows: • stimulation methods, • fracturing fluids, • mixing and behavior of reservoir fluids, • assessment of reservoir performance, • integration of surface drilling data, • estimation of geomechanical properties and hydrocarbon saturation, and • health and safety. *Exploitation of Unconventional Oil and Gas Resources: Hydraulic Fracturing and Other Recovery and Assessment Techniques* is an excellent introduction to the subject area of unconventional oil and gas reservoirs, but it also complements existing information in the same discipline. It is an essential text for higher education students and professionals in academia, research, and the industry.

Oil & Gas Science and Technology Feb 13 2021

Nutrition Management of the Cancer Patient Sep 10 2020 Abstract: This book provides nutrition guidelines and management techniques for cancer patients. Written by dietitians, nutritionists, and physicians for health professionals who are providing nutrition support for cancer patients, this publication describes skills and techniques acquired by these experts through years of experience. Topics include: nutrition needs of cancer patients; cancer's impact on the nutrition status of patients; screening, assessing, and monitoring; nutrition concerns for specific patient populations; nutrition concerns of treatment modalities; methods of management; tube feeding; parenteral nutrition; home care training; ethical and psychologic issues relating to the cancer patient; and cancer quackery.

In-Situ Burning for Oil Spill Countermeasures May 31 2022 Shelving Guide: Environmental Engineering In-situ burning is recognized as a viable alternative for cleaning up oil spills on land and water. It can rapidly reduce the volume of spilled oil and eliminate the need to collect, store, transport, and dispose of recovered oil, and

can also shorten the response time to a spill, thus reducing the chances that the spill will spread on the water surface or further into land. This book will serve as a comprehensive reference for all aspects of in-situ burning of oil spills and include the scientific aspects of the burning process and the related effects, as well as practical information about the procedures to be followed and equipment required for carrying out an in-situ burn. Features Serves as a complete source of information on in-situ burning as well as practical guide on how to implement the procedures. Explains procedures for burning in different situations, including on water, land, and ice. Provides information on worker health and safety precautions during burning. Covers several different types of emissions, their environmental fate, and how to monitor them. Includes numerous illustrative case studies.

Electrorheological Fluids: Mechanism, Properties, Structure, Technology And Applications Jul 09 2020 These proceedings cover the most recent progress and development on the physical mechanisms, materials technology, structure, properties, and application of electrorheological (ER) fluids. This area of research may make a great impact on industry and technology. Contributions from most leading experts in the field are included. This volume serves as a stimulating and valuable reference for students and research workers in condensed matter physics, materials science, chemistry and engineering. It not only gives details about the leading edge of research and applications, but also provides an overview of the field.

Structured Edible Oil: Towards a New Generation of Fat Mimetics Jun 19 2021 Prof. Ashok Patel of Guangdong Technion-Israel Institute of Technology (GTIIT), who served as a Topic Editor for this Research Topic, sadly passed away on Sunday 17th May 2020. We want to acknowledge the important role he played in developing this Research Topic.

Colloids and Interfaces in Oil Recovery Jul 01 2022 It is well-known that colloid and interface science and petroleum production are inextricably linked. Whether in the reservoir, with its porous structure, or during recovery, crude oil is intimately associated with rock surfaces and with water, often in the form of emulsions. This situation leads to highly complex systems, comprising multiple colloids and interfaces, which require to be optimized if oil is to be recovered efficiently, both in terms of economic cost and with due concern for the environment. This book contains a compilation of contemporary research topics which illustrate various aspects of the importance of colloids and interfaces in crude oil recovery through modifying conditions between the rock, crude oil, and water in the reservoir, in order to achieve improved oil recovery. The specific topics covered relate both to conventional oils, in which waterflooding is the most common secondary and tertiary means of recovery, and to non-conventional heavy oil and natural bitumen, which require thermal recovery methods, owing to their high viscosity.

Petroleum Refining. Vol. 3 Conversion Processes Apr 05 2020 This volume describes the characteristics of processes used in petroleum refining: upgrading light fractions (reforming and isomerization), converting distillates (catalytic cracking, hydrocracking, and associated equipment), converting residues (visbreaking, coking hydroconversion), and reducing air and water pollution (white product sweetening, acid gas, stack gas, and waste water treatment). This book is available in French Under the title "le raffinage du pétrole. Tome 3. Procédés de transformation". Contents : 1. Introduction. 2. Basic principles governing chemical changes. 3. Industrial catalysts. 4. Catalytic reforming. 5. Catalytic cracking. 6. Isomerization of light paraffins. 7. Aliphatic alkylation. 8. Olefin etherification. 9. Oligomerization. 10. Hydrocracking. 11. Visbreaking of residues. 12. Coking. 13. Residue hydroconversion. 14. Hydrogen production. 15. White products refining by sweetening. 16. Hydrotreating. 17. Acid gas treatment. 18. Desulfurization of stack gases. 19. Water treatment. References. Index.

Proceedings of the ... Arctic and Marine Oil Spill Program Technical Seminar Dec 26 2021

Advances in Fluid and Thermal Engineering Dec 14 2020 This book comprises select proceedings of the International Conference on Future Learning Aspects of Mechanical Engineering (FLAME 2018). The book gives an overview of recent developments in the field of thermal and fluid engineering, and covers theoretical and

experimental fluid dynamics, numerical methods in heat transfer and fluid mechanics, different modes of heat transfer, multiphase transport and phase change, fluid machinery, turbo machinery, and fluid power. The book is primarily intended for researchers and professionals working in the field of fluid dynamics and thermal engineering.
