Scan of Recent Travel Surveys Apr 17 2021 A specific objective of this scan of recent travel surveys is to facilitate the exchange of information among agencies and individuals having an interest in the design and conduct of household and other types of travel surveys. The information contained in this report complements the companion "Travel Survey Manual", published as part of the Travel Model Improvement Program (TMIP). The "Travel Survey Manual" is a reference document describing accepted practices and recent advancements for the most common types of travel surveys. Four purposes guided the development of this scan: to determine the general state-of-the-practice of travel surveys in this country; to identify the types of surveys being conducted, and the frequency of data collection; to compare United States survey practices to travel survey procedures being used in other countries; and, to assess the degree to which emerging state-of-the-art survey techniques are being introduced into practice.

Soil Survey Manual (U.S. Department of Agriculture Handbook No. 18) Jul 01 2022 The Soil Survey Manual, USDA Handbook No. 18, provides the major principles and practices needed for making and using soil surveys and for assembling and using related data. The term "soil survey" is used here to encompass the process of mapping, describing, classifying, and interpreting natural three-dimensional bodies of soil on the landscape. This work is performed by the National Cooperative Soil Survey in the United States and by other similar organizations worldwide. The Manual provides guidance, methodology, and terminology for conducting a soil survey but does not necessarily convey policies and protocols required to administer soil survey operations. The soil bodies contain a sequence of identifiable horizons and layers that occur in repeating patterns in the landscape as a result of the factors of soil formation as described by Dokuchaev (1883) and Jenny (1941).

Guidebook for Conducting Airport User Surveys Dec 02 2019 This report provides methods and useful information for conducting effective user surveys at airports. The guidebook introduces the basic concepts of survey sampling and the steps involved in planning and implementing a survey; describes the different types of airport user surveys; and provides guidance on how to design a survey and analyze its results. This guidebook will be of value to airport operators, planners, designers, and other stakeholders that need to survey airport users to obtain useful information to plan and operate their facilities appropriately and efficiently. Airport facilities can include all aspects of airport terminal buildings, parking lot operations, surface transportation, food and retail services, and employee accommodations, among others.
