Evolving Innovation Ecosystems Apr 29 2022 While emerging technologies create massive opportunity, especially for investors and companies that seek more adaptable forms of economic growth than currently available, value is held inert by traditional approaches, patents, and other closed systems. Yet, open data, content, and information may be the key to mass innovation for future technologies, although they bring difficult challenges to private-industry models that depend on the established ideas of intellectual property. It is from this foundational observation that OpenXFORM (a blending of the

The intent of the model design is to synthesize an approach to the process of innovation, inspired by natural systems and human-centric design processes. OpenXFORM describes how an open system of innovation can adapt to the unregulated world of information, data, and content; can decompose its own information to release to the open world; and can discover ways to find the points of synergy among the studied and tested methodologies that put human relationships first. This book presents an explicit innovation process that shows how to move from a breakthrough idea through a process that encourages

multidimensional concept, and its nature in scholarship continually evolves. One of the hindrances to the transition to greater openness in academia is this lack of clear understanding about how it fits into the practice of scholarly communication. To ensure that librarians as knowledge managers can better educate scholars about the benefits and challenges of open scholarship, Victoria Martin's *The Complete Guide to Open Scholarship* brings clarity to the concept of openness, tests assumptions concerning it, and strikes the right balance between breaking down complex ideas into simpler ones and honoring the reader's intelligence and previous knowledge of the subject. Readers will learn several ways in which openness can be perceived as well as the history of openness in scholarship. Drawing on specific examples, Martin discusses the most prominent scholarly models based on openness, barriers to openness, concerns about openness in scholarship, and the future of

Open Space Technology Jan 27 2022 This book, like all books, comes to an end, but that is by no means the end of the story of Open Space. In fact it is safe to say that we have barely begun. The total simplicity of Open Space (sit in a circle, create a bulletin board, open a marketplace, and go to work) contrasts radically with the quality of results and speed of achievement. The conventional theory and practice of meeting and organization would suggest that what happens in Open

does, not once but thousands of times in all parts of the world. So the continuing story of Open Space is all about this wonderful anomaly. Why does it work? How does it work? And perhaps most intriguing - if "it" works in Open Space (whatever "it" is) why couldn't it work twenty-four hours a day, seven days a week, 365 days of the year? My best guess is that the "it" is the primal power of self-organization, and if so the real significance of Open Space has little to do with better meetings, and everything to do with a deepening understanding of who we really are and how we might most effectively get on in this world. But all of that is an unfolding story and, as I would see it, a wonderful, ongoing natural experiment. And you are invited to participate.
